

## Napersoft Enhances Functionality of Napersoft CCM Document Platform 7

Naperville, IL—November 30, 2012—[Napersoft](#), a leading provider in Customer Communications Management (CCM) software, announced today the release of new functionality for [Napersoft CCM Document Platform 7](#). Napersoft CCM 7 is designed to help organizations quickly and easily compose, format and distribute personalized, customer documents through process-oriented workflows and open integration to data and other business applications.

The new functionality includes:

- **Re-designed navigation and menu features making it quicker and easier to create templates for both novices and advanced template designers.** The completely re-designed Napersoft CCM Author offers new, more intuitive navigation options including a re-designed Microsoft® Word ribbon; drag-and-drop capabilities for merge fields, images, paragraphs, repeating rows and other re-useable components; and a new Author Pane that allows template designers to quickly build business logic into templates through menu choices.
- **Enhanced functionality allowing more flexible and expanded types of document compositions.** Business users now have the ability to define and compose repeating sections and rows to easily generate a wide-variety of documents including invoices, statements, electronic health records and [explanation of benefits](#). The functionality also includes new support for formula definition and dynamic calculations within document tables.
- **Improved integration abilities allowing easier access to source data.** Enhancements to Napersoft Query Builder functionality enable easier integration with relational data. Additionally, Napersoft CCM 7 offers enhanced support for simultaneous queries of multiple relational databases and multiple layered XML data.
- **Performance improvements that optimize the composition and distribution of documents.** Enhancements include global caching of templates, optimized database queries for composition and distribution, PDF streaming to printers, and a recently implemented new rendering engine for increased flexibility and scalability.
- **Added support for SQL Server 2012 increasing technology platform choice options.**
